McCollister's Southern California Branch-014

McCollister's Grand Opening in Southern California was in March of 1991. Our 014 branch was established to support the growing customer base in Southern California and the Western Region. Today the Fontana branch (014) is a strategic location and hosts key McCollister's business units. McCollister's Installation Services, Industrial Fitness and Renewable Energy verticals as well as numerous National Account customers have grown to depend on our *Excellence Delivered Every Day* from this location.

Operationally we dispatch an "11 Western Fleet" which supports and augments our Corporate Fleet. In addition our long haul household goods fleet and summer peak capacity programs are managed from this location.

McCollister's has two warehouses in Fontana totaling 120,000 SQ Ft.

The facility offers a generous yard with overnight parking and newly remodeled offices and expanded driver amenities.

The most interesting job we recently completed was a full technical build for a Solar company. We worked side by side with their management team to refinish the panels. Production took 9 days. This work was outside our normal scope yet we stretched our skill set and grew with this new account.

Fontana 014 is managed by DJ Warden VP/GM who joined our team in October of 2008.

We appreciate the hard work of the team members at Fontana and look forward to your continued success of this Strategic location.
